Fund details

Fund category/type	Fixed income / Growth & Income	
Launch date	2 October 2019	
Financial year end	30 June	
Fund size	RM147.63 million	
NAV per unit	RM1.0672 (as at 30 May 2025)	
Highest/Lowest NAV per unit (12-month rolling back)	Highest 30 May 2025	RM1.0672
	Lowest 28 Jun 2024	RM1.0330
Income distribution	Once a year, if any.	
Specific risks	Interest rate risk, credit & default risk, country risk, currency risk (currency risk at the Fund's portfolio level and currency risk at the class level) and liquidity risk	
Sales charge	Up to 2.00% of the Fund's NAV per unit	
Annual management fee	Up to 0.50% p.a. of the NAV of the Fund	
Fund manager	Oh Jo Ann	
Sales office	BOS Wealth Management Malaysia Berhad 199501006861 (336059-U) ContactUs@boswm.com	

⁺ Volatility Factor (VF) as at 30 Apr 2025: 0.4. Volatility Class (VC) as at 30 Apr 2025: Very Low (below/same 4.73). VF means there is a possibility for the Fund in generating an upside return or downside return around this VF. VC is assigned by Lipper based on quintile ranks of VF for qualified funds. VF is subject to monthly revision and VC is revised every six months. The Fund's portfolio may have changed since this date and there is no guarantee that the Fund will continue to have the same VF or VC in the future. Presently, only funds launched in the market for at least 36 months will display the VF and its VC. Source: Lipper.

Gross distribution (sen)	3.20
Distribution yield (%)	3.00

[°] Distribution yield is calculated based on the most recent income distribution and divided by NAV per unit on the distribution date.

Fund Commentary

- The portfolio's bond allocation remained relatively unchanged to 38.12%, down from 38.18%. Despite the volatility in US Treasury (UST) yields, the bond portfolio has seen steady incremental improvements in mark-to-market (MTM) valuations. Looking ahead, the Fund intends to leverage this positive momentum by reinvesting the maturity proceeds into a new issuance to enhance yield further.
- The Fund will look for switching opportunities for its bond exposures without taking on undue interest rate or credit risk. Current growth and inflation backdrop remains conducive for corporate credits and the Fund will look for opportunities to increase exposures within the AA rated segment for yield enhancements.

Equity

Risk sentiments received a further boost in May when the US and China reached a temporary trade truce and lowered effective tariffs on exports to the US in the interim. Investors are optimistic that more deals would be struck with other trading partners, and this has helped global equity markets to continue making gains. Market movements in May (in local currency terms): US (+6.2%), Eurozone (+4.0%), Hong Kong (+5.3%), Shanghai (+1.8%), Japan (+5.3%), Taiwan (+0.0%), Singapore (+1.6%), Thailand (-4.0%), and Malaysia (-2.1%).

Market attention on the US shifted from tariffs to its fiscal position as the Trump administration put forth its first budget bill of the term. The "One Big Beautiful Bill Act" is likely to undergo further changes in coming weeks, but the fiscal stance, i.e. deficits, is expected to be maintained or slightly expansionary. Sentiment indicators in the US have also tracked back higher after weakening in April. This presents a dilemma for US risk assets as investors weigh up the implications of a moderate fiscal boost, the resilient US labour market, and elevated long-dated bond yields.

Barring a significant escalation in trade tariffs and a slowdown in global growth, Europe's growth is poised to see some traction from 2026, driven by (i) stronger fiscal and defence spending and (ii) a potential end to the Russia-Ukraine war that results in lower energy prices and higher confidence. Coupled with rate cuts by the European Central Bank (ECB), Europe has both a more supportive fiscal and monetary backdrop compared to other regions such as the US. In addition, valuations of European equities remain undemanding.

Japanese equities registered a rebound in both JPY and USD terms. Risk-reward profile of Japanese stocks appears to be balanced. On one hand, guidance by Japanese companies with their fiscal year ending 31 March 2025 came in relatively soft versus historical trends, while consensus earnings revision breadth remains negative. On the bright side, Japanese companies announced share buybacks in 2Q25, implying year-on-year growth and driving higher payout ratios. Furthermore, foreign flows remained supportive with as net buying of cash equities continued for seven consecutive weeks.

US-China geopolitical tensions have de-escalated after both countries agreed to roll back tariffs on each other's goods for a 90-day period, which will be positive for market sentiment in the near term. That said, it could also lower the urgency for China policymakers to rollout additional stimulus. 1Q25 results have seen some sequential improvement as earnings beat and miss ratio improved for both MSCI China Index. Valuations are undemanding with MSCI China Index trading at 10.3x forward P/E; which is at a 10% discount to the MSCI Emerging Market Index.

Despite falling 2.1% during the month, foreign investors turned net buyers of Malaysian equities, a reversal of previous seven consecutive months of net selling. That said, net buy flows for month of May was marginally positive as the final positive two weeks of May saw net sell flows by foreign investors of RM392m and RM1.0b respectively, which may be a function of reaction to the first quarter results. As a result, early gains, driven by a US-China tariff truce, faded on uninspiring 1Q earnings.

We continue to maintain an overall risk-on stance in our approach, on the back of relatively resilient global growth and earnings outlook. We see a period of near-term consolidation in equities given increasing uncertainties relating to inflation, tariffs and interest rates, although the long-term uptrend remains intact.

Fixed Income

In May, US Treasuries (UST) yields rose across the curve as investors were jolted over the passing of the One Big Beautiful Act by the House of Representative, which is projected to worsen the US federal deficit due to tax cuts and increased spending. In addition, Moody's stripped the US of its AAA rating, citing the sustained weakening of its fiscal metrics. The 2- and 10-year UST yields jumped by 30bps and 24bps respectively. However, markets found relief in the middle of the month as the Trump administration announced a 90 day pause on the US reciprocal tariffs, effectively lowering most of the import tariffs to 10% while lowering China's tariffs to 30% from 145%.

In Malaysia, government bond yields fell to a 3-year low as the market liquidity were boosted together with the increased expectation of interest rate cuts thanks to the ongoing trade tension. Foreign investors snapped up Malaysian bonds in April with a net purchase RM10.2 billion. During the month, the Malaysian Ringgit continued to rally, strengthening against the US dollar by 1.4%. The 3-year Malaysian Government Securities (MGS) yields fell by 10bps while the 10-year benchmark fell by 13bps. Similarly, corporate bond yields compressed with both the 10-year AAA and AA rated benchmarks falling by 6bps during the month. On 8 May, Bank Negara Malaysia (BNM) lowered the banking system's Statutory Reserve Ratio from 2% to 1%, releasing approximately RM19 billion of funds into the financial system to ensure sufficient liquidity for financial activities. As a result, the 3-month Kuala Lumpur Inter Bank Borrowing Rate, eased to 50bps above the Overnight Policy Rate (OPR) compared to 65bps in April. Malaysia reported first quarter year-on-year Gross Domestic Product (GDP) growth of 4.4%, driven by sustained household spending growth and steady investment.
